SUMMARY

Senior Product Designer with 9+ years in complex B2B SaaS, turning non-linear algorithms, agentic systems and dense data into clear, self-service interfaces. Builds design systems that coding agents can implement from: documentation embedded in components cut open design questions from **15 to 2**. Shipped the bidding and analytics tools of a platform that grew from **$8M to $30M+** in monthly media.

EXPERIENCE

Senior Product Designer, Kissterra

Jul 2022 – Jul 2026

MarketingOS, a data-heavy B2B SaaS for customer acquisition used by top U.S. insurance carriers. Owned UX/UI end to end, from discovery to shipped features, partnering daily with product and engineering; sole designer for the last two years.

- Designed the bidding and analytics tools behind the platform's growth: monthly media investment **$8M → $30M+**, **7% MoM** growth in policy binds.
- Turned an opaque price-experimentation algorithm into a **self-service bidding tool**: impact forecasts, confidence indicators, and human-in-the-loop controls that media buyers act on.
- Designed the platform's **AI layer**: a conversational co-pilot and automated recommendations, with UX patterns for explainability and step-by-step automation.
- Built and owned the **design system** from scratch, then made it readable for coding agents (Cursor, Claude Code): open design questions went from **15 on one feature to 2 across the next two**.
- Redesigned legacy flows across campaign management, analytics, and client onboarding so enterprise clients could self-serve.

Product Designer → Senior Product Designer, Camilyo

Mar 2017 – Jul 2022

All-in-one B2B/B2C platform of 10+ connected modules for U.S. small businesses and their customers, on desktop and mobile.

- Design lead for the **design system** across **5 designers and 50 engineers**: built and governed a unified component library, style guide, and UI patterns; owned the Sketch-to-Figma migration.
- Redesigned a small-business CRM into **one conversation thread**: 8 request types in one inbox, one cycle from request to payment.
- Mentored designers and set the UI quality bar; ran usability research and no-code prototypes to guide iteration.

SKILLS & TOOLS

- **Tools:** Figma (expert), Figma Make, Jitter, Cursor, Claude Code, Hotjar, Maze, UserTesting, FullStory, Heap
- **Design:** end-to-end product design, interaction design, information architecture, prototyping, design systems and tokens, AI-agent context layers, A/B testing
- **AI products:** conversational UX, agentic flows, human-in-the-loop patterns, AI prototyping in code
